

Law Firm CRM: Case and Document Management Solution

1. Problem Statement

Law firms face major problems due to poor case and document management. This leads to lost revenue, delayed client responses, compliance risks, and inefficiencies. Attorneys spend a large part of their time searching for files instead of doing billable work. A mid-sized law firm can lose \$500K–\$1M every year due to these issues.

2. Project Overview

The solution is a Legal Case Management CRM that stores all case files, documents, and communications in one place. It automates case tracking, deadlines, billing, and client communication.

Key Benefits:

- Centralized, searchable database for all case data
- Automated tracking of deadlines and case progress
- Real-time collaboration for attorneys and staff
- Automatic billing based on time tracking
- Client portal for case updates and communication

3. Objectives

Primary goals are to improve efficiency, automate manual tasks, enhance client experience, ensure compliance, and improve financial performance. Success will be measured by reduced admin time, better deadline compliance, higher client satisfaction, and ROI within 12-18 months.
